

AI-based multi-sensor fusion for solving challenging driving scenarios

Robert-Zsolt Kabai

Team Lead, Deep Learning for Point Cloud
Budapest Artificial Intelligence Development Center
Continental

Goals and Real-world Challenges

Goals and topics

- › Road safety is a priority
- › LiDAR-Camera Fusion
- › Enhanced Object Detection with colorized Point Clouds
- › Robust localization of Traffic Participants

Assisted and autonomous driving

Sense

Plan

Act

Real world Deep Learning challenges

- › Fundamental difference in weather conditions

Precipitation

Visibility conditions

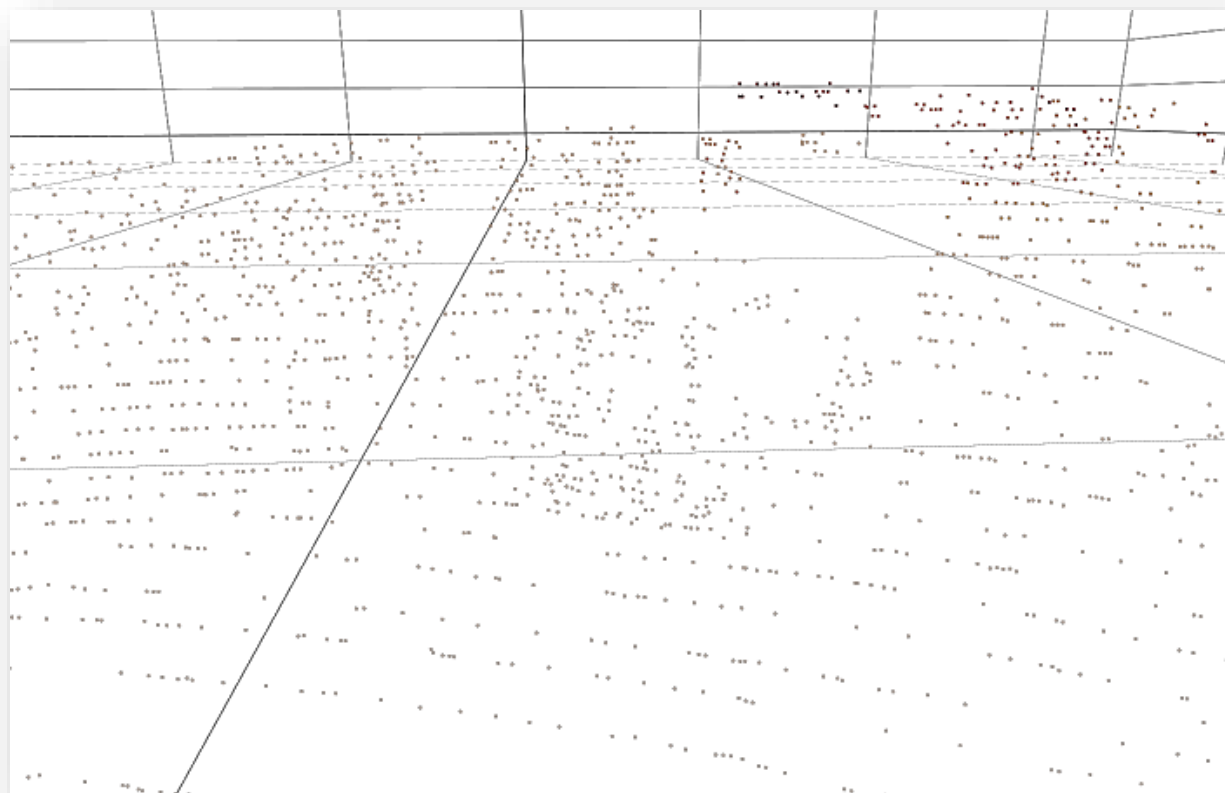

Real world Deep Learning challenges

- › The real world is often too complicated and wild to be perfectly prepared.

AI-based LiDAR-Camera Fusion

LIDAR-Camera Fusion using AI

Input
Sparse point cloud

Input
RGB image

Fusion based
3D Reconstruction

Output
Dense RGB point cloud

LIDAR-Camera Fusion - 3D Reconstruction

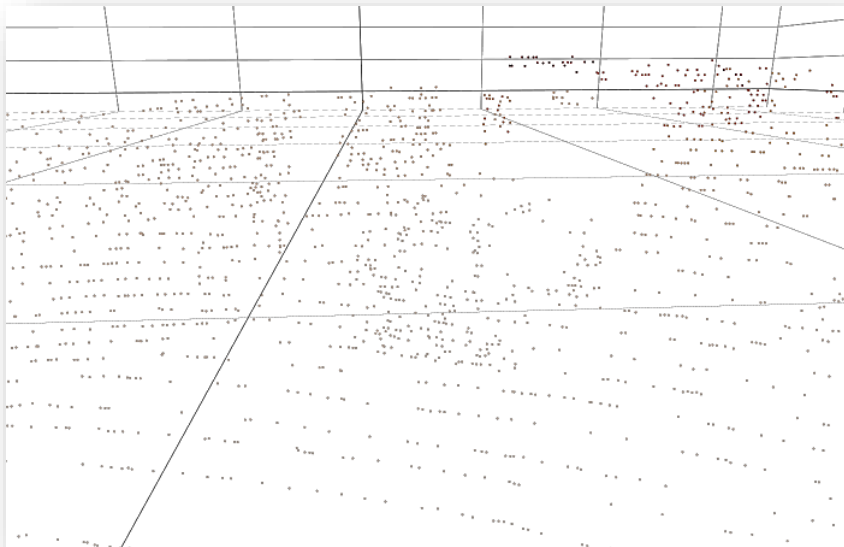

3D view of point clouds – a closer look

Input
Sparse point cloud

Fusion based
3D Reconstruction

Output
Dense RGB point cloud

Camera-Lidar Fusion benefits

Distinguishing close
by objects
(Object Detection)

Depth of potholes

Height of obstacles

Distinguishing close
by objects
(Semantic Segmentation)

3D Environmental
Mapping

Camera-LIDAR Fusion

100x LIDAR resolution upscaling

Input
Sparse point cloud

Input
RGB image

Output
Dense depth map

Demo – Comparison with Vision-only models

Camera Only
(Structure from Motion)

Ours
(Low-level Fusion)

Demo – Comparison using automotive grade LIDAR

Sensor outputs

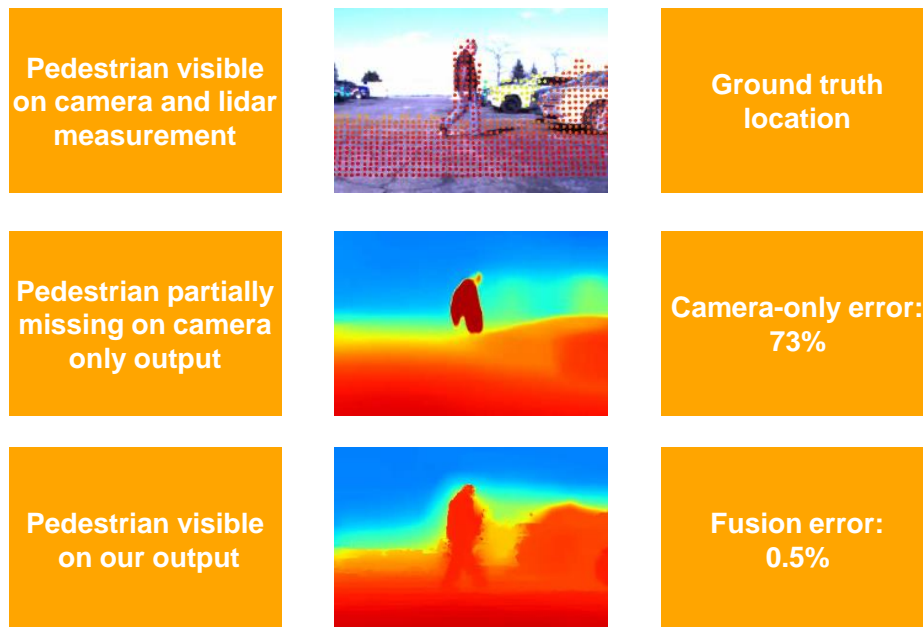

Camera Only
(Structure from
Motion)

Ours
(Low-level Fusion)
(Refined)

Robust localization of Vulnerable Road Users

2D Object Detection enhanced with Fusion

Saving cyclists and pedestrians

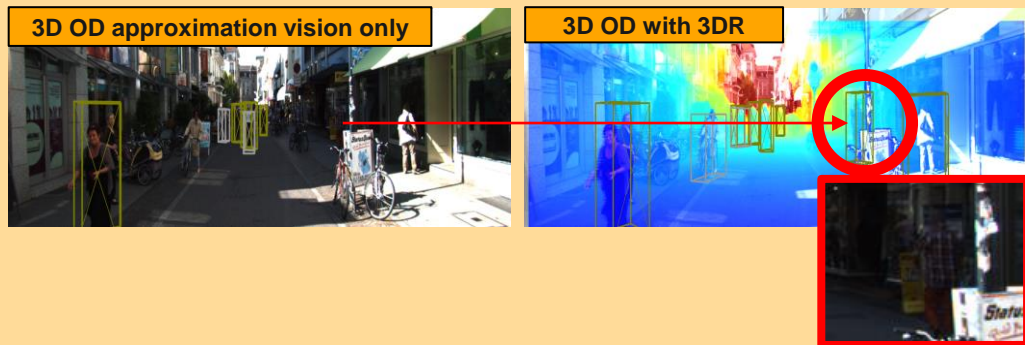

Classifying correctly

3D Object Detection enhanced with Fusion

Saving cyclists and pedestrians

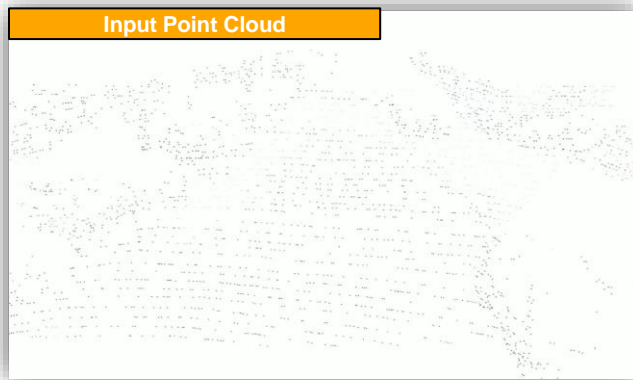

AP gain by 3D Reconstruction

LIDAR-Camera fusion Summary

- Point cloud resolution enhancement: **~100x resolution**
- 3D localization errors from a **car length** to **less than a quarter car length**
- **Real-time** and fits on a small **embedded chip**

We make
FUTURE MOBILITY
happen
